PROJECTS

Wild Bird Species Identification Based On Light Weight Model With Dynamic Convolution
Aug 2024 - Dec 2024
Developed an AI-based bird species identification system utilizing a lightweight convolutional neural network integrated with dynamic convolution layers to optimize performance and accuracy. The model was trained on a curated dataset of wild bird images, achieving high accuracy while maintaining computational efficiency, making it suitable for real-time applications on resource-constrained devices such as mobile phones or edge devices. The system processes input images to classify bird species with improved adaptability to variations in lighting, posture, and background.

SKILLS

- Web development
- Java
- Python

EXTRA CURRICULAR ACTIVITIES

- Student Coordinator at College level
